THE SPIRAL OF LIVING WATERS

Transport Clearing Protocol

Prepared by Paul Trafford

Certified Regenerative Health Practitioner

WHO THIS IS FOR

This protocol is for anyone beginning a detox, cleanse, or regenerative health program — or anyone who has tried one before and felt worse instead of better. It is also the essential foundation for anyone undertaking the Luminous Mind, Inner Garden, Higher Flame, or Cell Shedding protocols. Without open transport, every other intervention risks recirculation.

THE PROBLEM

Your body stores toxins in fat. Mercury, lead, pesticides, industrial chemicals — all of them lipophilic, all drawn to fat tissue, all sequestered in your deep reserves. This is not a malfunction. It is intelligent. The body stores them there **to keep them out of circulation** — out of the blood, out of the organs, out of the brain.

Here is the catch-22: the body will not release these stored toxins until it is confident that the transport systems can carry them safely out. If the liver cannot transform them, if the elimination pathways — urine, stool, sweat — are not flowing adequately, then mobilised toxins simply **recirculate**.

And because the brain is seventy percent fat and receives more blood flow than any organ except the heart, recirculating toxins settle preferentially **in the brain**.

> *The very organ you are trying to protect becomes the dump site for a detox that was attempted without adequate transport.*

The symptoms are unmistakable: brain fog, headache, lethargy, disrupted sleep. These are **retox symptoms** — the body re-poisoning itself with toxins it mobilised but could not eliminate. The standard advice — "push through, it means it's working" — is incorrect. It is not working. It is recirculating.

THE SOLUTION

Open the exits before you start the clearing.

The liver transforms fat-soluble toxins into water-soluble waste in two phases. Phase 1 oxidises the toxin — breaking it open, making it reactive. Phase 2 attaches a large water-soluble molecule (primarily **glutathione**) that escorts the toxin to an exit. Without adequate Phase 2 support, Phase 1 intermediates accumulate — often more toxic than the originals.

Phase 2 requires specific co-factors that most people are deficient in. This protocol provides them systematically, while simultaneously supporting the three elimination routes: kidneys (water), gut (earth), and skin (air).

SUPPLEMENT PROTOCOL

Duration: Ongoing foundation. Begin at least 2 weeks before any intensive protocol.

Morning — with food

Supplement	Dose	Purpose
Vitamin D3 + K2	10,000 IU D3 + 200 mcg K2	Master immune regulator. Maintain blood levels above 80 ng/mL. K2 directs calcium to bones, not arteries.
Vitamin C	1,000 mg	Antioxidant. Protects against Phase 1 intermediates. Second dose in evening.
NAC (N-Acetyl Cysteine)	1,000 mg	Glutathione precursor. The body's master antioxidant and Phase 2 escort molecule. The single most important supplement in this protocol.
Multivitamin	Per label	Foundation mineral and vitamin coverage.
Vitamin B12	5,000 mcg	Methylation support. Liver Phase 1 + 2 co-factor.
Saffron	Per label	Hepatoprotective. Supports bile flow. Anti-inflammatory. Traditional liver tonic in Tibetan medicine.

Evening — with or after dinner

Supplement	Dose	Purpose
Alpha-Lipoic Acid (ALA)	300–600 mg every 3 days	The only common compound that crosses the blood-brain barrier in both directions. Mobilises stored heavy metals from brain tissue during sleep. Every 3 days allows full clearance before next dose.
Magnesium Citrate	350 mg (1,000 mg during intensive)	Liver detox co-factor. Bowel motility — critical during detox. If bowels stall, toxins in bile are reabsorbed through the gut wall. Increase to 1,000 mg during intensive protocols.
Zinc	15–30 mg	Liver Phase 1 + 2 co-factor. Increase to 30 mg during intensive protocols.
Vitamin C	1,000 mg	Second dose. Split dosing maintains sustained antioxidant levels through the night.

Optional support

Supplement	Dose	Purpose
Sodium Bicarbonate	½ tsp evening 2hrs after meal	Alkalinises urine. Supports kidney elimination during active detox.
Coconut Oil / MCT Oil	1 tbsp with food	Medium-chain triglycerides bypass digestion, convert directly to ketones. Gateway fat for mitochondrial retraining.
Herbal Laxatives	As needed	Backup for bowel motility during intensive protocols. Use only if magnesium alone is insufficient.

THE THREE EXITS

The liver transforms toxins. But transformed toxins must still leave the body. Three exit routes must all be flowing — if any one stalls, the others cannot compensate fully.

1. Kidneys — Water

The kidneys filter water-soluble conjugated toxins from the blood and release them through urine. **Hydrate 2–3 litres of filtered water daily** during active clearing. Warm water with lemon on waking opens the renal pathway. The kidneys cannot flush what there is no river to move.

2. Gut — Earth

Conjugated toxins riding bile enter the duodenum and travel the length of the intestines. **If the bowels stall, sealed vessels break open against the gut wall and toxins are reabsorbed into the blood.** This is the catch-22 at its most visceral. Daily bowel movement is non-negotiable during any clearing protocol. Magnesium citrate is the first line. Herbal laxatives as backup. Bitter greens (dandelion, arugula) open bile flow.

3. Skin — Air

The skin is your largest elimination organ — two square metres of living, breathing membrane. Sweat carries traces of what the liver transformed and the blood delivered. **20 minutes of sweating daily** during intensive protocols: exercise, sauna, or hot bath. The skin is not where you end. It is where you exchange.

DAILY SCHEDULE

Print this and place it where you will see it each morning.

Time	Action
On waking	Large glass of warm filtered water with lemon.
Morning (with food)	D3+K2 · Vitamin C (1,000mg) · NAC (1,000mg) · B12 · Multivitamin · Saffron
Throughout day	Hydrate: 2–3 litres filtered water. Emphasise bitter greens, cruciferous vegetables. Zero alcohol.
Afternoon/ evening	20 minutes sweating: exercise, sauna, or hot bath.
Evening (with dinner)	ALA (300–600mg, every 3 days) · Magnesium (350–1,000mg) · Zinc (15–30mg) · Vitamin C (1,000mg)
Before bed	Optional: ½ tsp sodium bicarbonate in water (2hrs after last meal).

LIFESTYLE RECOMMENDATIONS

Diet

Emphasise bitter greens (dandelion, arugula, endive) — they stimulate bile flow. Cruciferous vegetables (broccoli, cauliflower, kale, Brussels sprouts) provide sulforaphane, which supports Phase 2 conjugation. Reduce or eliminate alcohol completely during active clearing — it competes for the same liver pathways your protocol is supporting.

Sleep

7–9 hours per night. The brain's glymphatic cleansing system is most active during deep sleep — cerebrospinal fluid washes through the brain tissue, clearing metabolic waste. Alpha-lipoic acid is taken in the evening specifically because this nightly cleansing cycle is when the brain's stored toxins are most accessible. Prioritise sleep during this protocol.

Movement

Gentle daily movement — walking, yoga, rebounding, swimming. The lymphatic system has no pump; it relies on muscular contraction and gravity to circulate. A sedentary day stalls lymphatic transport. Even 20 minutes of walking supports elimination.

Stress

Cortisol diverts the body's resources from maintenance and detoxification to emergency management. Any stress-reduction practice — meditation, breathwork, time in nature, social connection, adequate rest — directly supports the transport clearing by keeping the body in parasympathetic (rest-and-repair) mode.

Environment

Reduce ongoing toxic exposure where possible. Filter drinking and shower water (fluoride filter recommended — approximately $20). Choose organic produce, particularly for the "dirty dozen." Reduce plastic food containers. The protocol clears what has accumulated; minimising new exposure supports its effectiveness.

WHAT TO EXPECT

Week 1

The body begins responding to the co-factors. Bowel frequency may increase (this is the magnesium working — a positive sign). Sleep may deepen as the evening protocol takes effect. Some people notice increased urination as hydration supports renal clearance. Energy levels remain stable or improve slightly.

Week 2

Glutathione levels begin building from the NAC supplementation. The liver's Phase 2 capacity increases. Some people report clearer skin as the skin pathway begins releasing stored material. On ALA days, mild detox sensations are possible (slight headache, transient fatigue) — this is the brain releasing stored metals through the glymphatic system. These should be brief and mild. If persistent or severe, reduce ALA dose or frequency and increase hydration.

Week 3–4

The transport systems are now functioning at a higher baseline. Sleep quality often improves noticeably. Skin continues to clear. Energy stabilises. The body is now prepared for more intensive protocols (Luminous Mind, Inner Garden, Higher Flame) if desired. Continue this foundation protocol throughout.

When to consult a practitioner

If you experience persistent brain fog, severe headache, unusual fatigue, or any concerning symptoms beyond mild transient detox effects, consult a healthcare provider. Reduce supplement doses and increase hydration while seeking guidance. This protocol supports the body’s natural processes — it should feel supportive, not distressing.

THE BIGGER PICTURE

The transport clearing is the foundation beneath a larger regenerative framework — five interconnected protocols that address the body's major systems in a specific sequence:

1. **The Spiral of Living Waters** — Transport Clearing (this protocol)
2. **The Spiral of the Luminous Mind** — Brain detoxification + hippocampal repair
3. **The Spiral of the Inner Garden** — Gut ecology restoration
4. **The Spiral of the Higher Flame** — Metabolic shift from sugar to fat
5. **The Spiral of Cell Shedding** — Senolytic clearing of senescent cells

Each protocol builds on the ones before it. The transport clearing ensures that every subsequent intervention can do its work without the catch-22 of recirculation. It is not a standalone detox — it is the permanent infrastructure that makes all other clearing safe and effective.

The protocols are designed to be repeated at the equinoxes — twice a year — following the body's natural rhythms of clearing and renewal. Each cycle deepens. Each round builds on the last.

This protocol is part of **The Spiral of Cellular Light** — a regenerative health framework that integrates these material protocols with sound companions and contemplative practices, addressing the body at every layer: material, vibratory, and intentional.
