Cell Shedding Field Guide

Targeted Senolytic Clearing, Autophagy Activation & SASP Reduction

As cells reach replicative exhaustion, some become 'zombie' senescent cells that secrete inflammatory SASP cytokines. Pulse-clearing senescent cells rejuvenates tissue function.

Core Biophysics Principles

1. Senescent Cell Burden
Non-dividing senescent cells accumulate with age, degrading surrounding tissue architecture through pro-inflammatory SASP secretion.

2. Pulsed Senolytic Interventions
Unlike daily supplements, senolytics work best in periodic pulses to eliminate senescent cells while preserving healthy progenitor cells.

3. Macro-Autophagy Recycling
Clearing cellular debris through lysosomal degradation restores mitochondrial quality control and youthful cellular bioenergetics.

Key Protocol Elements & Interventions

- Flavonoid Senolytics (Quercetin, Fisetin, Luteolin)
- Autophagy Activators (Spermidine, Resveratrol, Trehalose)
- SASP Cytokine Dampeners (Curcuminoids, Boswellia, Epigallocatechin Gallate)
- Intermittent Pulsed Fasting Protocols

VERIFIED PRACTITIONER PROTOCOL: CELL SHEDDING PRACTITIONER PROTOCOL

Order direct practitioner-grade formulations on Fullscript. Enjoy automatic monthly refills, verified quality, and practitioner oversight.
