■ Dark Mirror Field Guide

Mineral Balance, Heavy Metal Chelation & Deep Tissue Bio-Clearing

Heavy metals and synthetic halogen minerals bind to cellular enzymes. Systematic mineral replacement coupled with natural chelators restores enzyme kinetics and cellular voltage.

Core Biophysics Principles

1. Toxic Mineral Displacement
Heavy metals (lead, mercury, cadmium, aluminum) displace essential ionic minerals (zinc, copper, magnesium, selenium) from active enzyme sites.

2. Extracellular Binding & Biliary Elimination
Natural chelators bind circulating heavy metals and route them safely into bile for fecal excretion without re-absorption.

3. Bio-Unavailable Mineral Balancing
Restoring proper copper/zinc and calcium/magnesium ratios reactivates ceruloplasmin and endogenous SOD antioxidant enzymes.

Key Protocol Elements & Interventions

- Clinical Grade Mineral Chelators (Modified Citrus Pectin, Clinoptilolite Zeolite, Chlorella)
- Trace Mineral Replenishment Blend (Fulvic/Humic Minerals, Ionic Zinc, Copper Sebacate)
- Biliary Flow Support (TUDCA, Ox Bile, Dandelion Root)
- Glutathione & Metallothionein Induction Matrix

VERIFIED PRACTITIONER PROTOCOL: DARK MIRROR PRACTITIONER PROTOCOL

Order direct practitioner-grade formulations on Fullscript. Enjoy automatic monthly refills, verified quality, and practitioner oversight.
