Inner Garden Field Guide

Gut Microbiome Ecology, SCFA Signaling & Mucosal Barrier Integrity

The gut is a living microbial rainforest where short-chain fatty acids (butyrate, acetate, propionate) communicate with the vagus nerve and regulate systemic immune signaling.

Core Biophysics Principles

1. Mucosal Lining Integrity
Tight junction proteins (zonulin, occludin) protect systemic circulation from endotoxins like Lipopolysaccharide (LPS).

2. Short-Chain Fatty Acid (SCFA) Cascades
Microbial fermentation of fermentable fibers feeds colonocytes and regulates inflammatory gene expression.

3. Microbiome Circadian Rhythmicity
Gut microbes follow daily light/dark oscillations that coordinate metabolic rate and neurotransmitter synthesis.

Key Protocol Elements & Interventions

- Spore-Based & Human-Origin Microbiota Strains
- Mucosal Barrier Repair (L-Glutamine, Zinc Carnosine, Deglycyrrhizinated Licorice)
- Prebiotic Diversity Blend (Acacia Fiber, Inulin, Polyphenols)
- Targeted Botanical Antimicrobials & SCFA Boosters

VERIFIED PRACTITIONER PROTOCOL: INNER GARDEN PRACTITIONER PROTOCOL

Order direct practitioner-grade formulations on Fullscript. Enjoy automatic monthly refills, verified quality, and practitioner oversight.
