Living Waters Field Guide

Fluid Dynamics, Interfacial EZ Water & Vascular Transport Kinetics

Water inside human tissue is not mere bulk fluid—it forms structured Exclusion Zone (EZ) water (H_3O_2) along hydrophilic cell membranes, driving vascular micro-circulation and cellular clearing.

Core Biophysics Principles

1. Interfacial EZ Water Formation
Hydrophilic cell surfaces structure intracellular water into viscous, gel-like Exclusion Zones that carry negative electric charge.

2. Charge-Driven Vascular Flow
Radiant infrared light and cellular energy expand EZ water zones, propelling micro-vascular blood flow without relying solely on cardiac pumping.

3. Hepatic & Renal Sequence Clearing
Supporting Phase I/II liver processing and renal hydration before intensive clearing prevents systemic toxic recirculation.

Key Protocol Elements & Interventions

- Pure Electrolyte Matrix (Magnesium, Potassium, Bicarbonate)
- Infrared Light Exposure & Sunrise Hydration Rituals
- Targeted Liver Transport Compounds (N-Acetyl Cysteine, Milk Thistle)
- Structured Mineral Hydration Schedule

VERIFIED PRACTITIONER PROTOCOL: LIVING WATERS PRACTITIONER PROTOCOL

Order direct practitioner-grade formulations on Fullscript. Enjoy automatic monthly refills, verified quality, and practitioner oversight.
